DDM Server (Web administration)

DDM Server provides the central model repository and Web administration workspace for team modeling. Model users can browse, edit, version, comment on, and submit models for review. Administrators manage directories, permissions, workflows, checks, users, and roles.

Main tasks

Goal	Guide
Understand the server role	Product overview
Find, browse, and open models	Data models
Edit models online and save versions	Online modeling
Apply standards during online modeling	Standards in online modeling
Manage directories, branches, and permissions	Directory management and Permissions
Review model changes	Approval management and Workflow management
Inspect versions and generate scripts	Version history and Script generation
Configure platform rules	System management and Model check rules
Maintain organizations and accounts	User management

User roles

Regular users work with models, comments, branches, and approvals. Administrators configure the model repository, permissions, workflows, check rules, custom properties, organizations, users, and roles. The available menus depend on the current license and account permissions.

Relationship to other DDM products

Use [DDM Client](#) for complex modeling, database reverse engineering, and batch conversion. Use [DDM Archy](#) for business objects, application systems, and architecture views. Use [DDM Dora](#) for intelligent modeling and analysis assistance.

Product overview

Use the Product overview controls to complete this task and verify the result.

Overview

Review the available Product overview options, then save the change when the result is correct. | --- | --- | --
- | The Product overview workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Product overview operation. Use the Product overview controls to complete this task and verify the result. Review the available Product overview options, then save the change when the result is correct. The Product overview workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Product overview operation.

Usage

Use the Product overview controls to complete this task and verify the result.

- Follow the Product overview workflow and verify the result before saving.
- Follow the Product overview workflow and verify the result before saving.

Configuration

role	Key tasks
Review the available Product overview options, then save the change when the result is correct.	
The Product overview workflow follows the permissions and settings of the current model or workspace.	

Check the displayed values before continuing with the next Product overview operation.

Glossary

Use the Product overview controls to complete this task and verify the result. | --- | --- | Review the available Product overview options, then save the change when the result is correct. The Product overview workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Product overview operation. Use the Product overview controls to complete this

task and verify the result. Review the available Product overview options, then save the change when the result is correct. The Product overview workflow follows the permissions and settings of the current model or workspace.

Data models

Use the Data models controls to complete this task and verify the result.

Review the available Data models options, then save the change when the result is correct.

The Data models workflow follows the permissions and settings of the current model or workspace.

Overview

Check the displayed values before continuing with the next Data models operation.

Use the Data models controls to complete this task and verify the result. | --- | --- | --- | Review the available Data models options, then save the change when the result is correct. The Data models workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Data models operation. Use the Data models controls to complete this task and verify the result.

Review the available Data models options, then save the change when the result is correct.

Usage

The Data models workflow follows the permissions and settings of the current model or workspace. | --- | --
- | Check the displayed values before continuing with the next Data models operation. Use the Data models controls to complete this task and verify the result. Review the available Data models options, then save the change when the result is correct. The Data models workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Data models operation. Use the Data models controls to complete this task and verify the result. Review the available Data models options, then save the change when the result is correct. The Data models workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Data models operation. Use the Data models controls to complete this task and verify the result. Review the available Data models options, then save the change when the result is correct.

Configuration

The Data models workflow follows the permissions and settings of the current model or workspace.

Check the displayed values before continuing with the next Data models operation. | --- | --- | Use the Data models controls to complete this task and verify the result. Review the available Data models options, then save the change when the result is correct. The Data models workflow follows the permissions and settings of the current model or workspace.

Check the displayed values before continuing with the next Data models operation.

Model search

Use the Model search controls to complete this task and verify the result.

Overview

1. Complete this step in the Model search workflow, then verify the result.
2. Complete this step in the Model search workflow, then verify the result.

Review the available Model search options, then save the change when the result is correct.

Usage

1. Complete this step in the Model search workflow, then verify the result.
2. Complete this step in the Model search workflow, then verify the result.
3. Complete this step in the Model search workflow, then verify the result.

The Model search workflow follows the permissions and settings of the current model or workspace. | --- | - -- | --- | Check the displayed values before continuing with the next Model search operation. Use the Model search controls to complete this task and verify the result. Review the available Model search options, then save the change when the result is correct.

The Model search workflow follows the permissions and settings of the current model or workspace.

Check the displayed values before continuing with the next Model search operation.

Configuration

- Follow the Model search workflow and verify the result before saving.
- Follow the Model search workflow and verify the result before saving.
- Follow the Model search workflow and verify the result before saving.

Operation notes

Use the Model search controls to complete this task and verify the result. | --- | --- | Review the available Model search options, then save the change when the result is correct. The Model search workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Model search operation.

Create a branch

Use the Create a branch controls to complete this task and verify the result.

Overview

Review the available Create a branch options, then save the change when the result is correct. | --- | --- | The Create a branch workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Create a branch operation. Use the Create a branch controls to complete this task and verify the result.

Usage

1. Complete this step in the Create a branch workflow, then verify the result.
2. Complete this step in the Create a branch workflow, then verify the result.
3. Complete this step in the Create a branch workflow, then verify the result.

Review the available Create a branch options, then save the change when the result is correct.

The Create a branch workflow follows the permissions and settings of the current model or workspace.

Configuration

Check the displayed values before continuing with the next Create a branch operation. | --- | --- | Use the Create a branch controls to complete this task and verify the result. Review the available Create a branch options, then save the change when the result is correct. The Create a branch workflow follows the permissions and settings of the current model or workspace.

Check the displayed values before continuing with the next Create a branch operation.

Operation notes

- Follow the Create a branch workflow and verify the result before saving.
- Follow the Create a branch workflow and verify the result before saving.
- Follow the Create a branch workflow and verify the result before saving.

Delete models

Use the Delete models controls to complete this task and verify the result.

Overview

Review the available Delete models options, then save the change when the result is correct. | --- | --- | --- |
The Delete models workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Delete models operation.

Use the Delete models controls to complete this task and verify the result.

Usage

1. Complete this step in the Delete models workflow, then verify the result.
2. Complete this step in the Delete models workflow, then verify the result.
3. Complete this step in the Delete models workflow, then verify the result.

Review the available Delete models options, then save the change when the result is correct.

The Delete models workflow follows the permissions and settings of the current model or workspace.

Configuration

Check the displayed values before continuing with the next Delete models operation.

Use the Delete models controls to complete this task and verify the result. | --- | --- | Review the available Delete models options, then save the change when the result is correct. The Delete models workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Delete models operation. Use the Delete models controls to complete this task and verify the result.

Review the available Delete models options, then save the change when the result is correct.

Operation notes

- Follow the Delete models workflow and verify the result before saving.
- Follow the Delete models workflow and verify the result before saving.

- Follow the Delete models workflow and verify the result before saving.

Directory management

Use the Directory management controls to complete this task and verify the result.

Overview

Review the available Directory management options, then save the change when the result is correct. | --- | -
-- | --- | The Directory management workflow follows the permissions and settings of the current model or
workspace. Check the displayed values before continuing with the next Directory management operation.
Use the Directory management controls to complete this task and verify the result.

Review the available Directory management options, then save the change when the result is correct.

The Directory management workflow follows the permissions and settings of the current model or
workspace.

Check the displayed values before continuing with the next Directory management operation.

Use the Directory management controls to complete this task and verify the result.

Usage

Review the available Directory management options, then save the change when the result is correct.

The Directory management workflow follows the permissions and settings of the current model or
workspace. | --- | --- | --- | Check the displayed values before continuing with the next Directory
management operation. Use the Directory management controls to complete this task and verify the result.
Review the available Directory management options, then save the change when the result is correct. The
Directory management workflow follows the permissions and settings of the current model or workspace.

Check the displayed values before continuing with the next Directory management operation.

Use the Directory management controls to complete this task and verify the result.

Configuration

Review the available Directory management options, then save the change when the result is correct. | --- | -
-- | --- | The Directory management workflow follows the permissions and settings of the current model or
workspace. Check the displayed values before continuing with the next Directory management operation.
Use the Directory management controls to complete this task and verify the result. Review the available

Directory management options, then save the change when the result is correct. The Directory management workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Directory management operation.

Use the Directory management controls to complete this task and verify the result.

Operation notes

- Follow the Directory management workflow and verify the result before saving.
- Follow the Directory management workflow and verify the result before saving.
- Follow the Directory management workflow and verify the result before saving.

Browse models

Use the Browse models controls to complete this task and verify the result.

Overview

1. Complete this step in the Browse models workflow, then verify the result.
2. Complete this step in the Browse models workflow, then verify the result.
3. Complete this step in the Browse models workflow, then verify the result.

Review the available Browse models options, then save the change when the result is correct.

The Browse models workflow follows the permissions and settings of the current model or workspace.

Usage

Check the displayed values before continuing with the next Browse models operation. | --- | --- | --- | Use the Browse models controls to complete this task and verify the result. Review the available Browse models options, then save the change when the result is correct. The Browse models workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Browse models operation. Use the Browse models controls to complete this task and verify the result. Review the available Browse models options, then save the change when the result is correct.

Configuration

1. Complete this step in the Browse models workflow, then verify the result.
2. Complete this step in the Browse models workflow, then verify the result.
3. Complete this step in the Browse models workflow, then verify the result.

The Browse models workflow follows the permissions and settings of the current model or workspace.

Operation notes

- Follow the Browse models workflow and verify the result before saving.
- Follow the Browse models workflow and verify the result before saving.
- Follow the Browse models workflow and verify the result before saving.

Modelentity

Use the Model entities controls to complete this task and verify the result.

Overview

1. Complete this step in the Model entities workflow, then verify the result.
2. Complete this step in the Model entities workflow, then verify the result.
3. Complete this step in the Model entities workflow, then verify the result.
4. Complete this step in the Model entities workflow, then verify the result.

Review the available Model entities options, then save the change when the result is correct.

The Model entities workflow follows the permissions and settings of the current model or workspace.

Usage

1. Complete this step in the Model entities workflow, then verify the result.
2. Complete this step in the Model entities workflow, then verify the result.
3. Complete this step in the Model entities workflow, then verify the result.
4. Complete this step in the Model entities workflow, then verify the result.
5. Complete this step in the Model entities workflow, then verify the result.

Check the displayed values before continuing with the next Model entities operation.

Use the Model entities controls to complete this task and verify the result.

Configuration

Review the available Model entities options, then save the change when the result is correct. | --- | --- | The Model entities workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Model entities operation. Use the Model entities controls to complete this task and verify the result. Review the available Model entities options, then save the change when the result is correct.

The Model entities workflow follows the permissions and settings of the current model or workspace.

Permissions

Use the Permissions controls to complete this task and verify the result.

ManageModeluserpermission

1. Complete this step in the Permissions workflow, then verify the result.
2. Complete this step in the Permissions workflow, then verify the result.
3. Complete this step in the Permissions workflow, then verify the result.
4. Complete this step in the Permissions workflow, then verify the result.

Overview

Review the available Permissions options, then save the change when the result is correct. | --- | --- | The Permissions workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Permissions operation. Use the Permissions controls to complete this task and verify the result.

Usage

Review the available Permissions options, then save the change when the result is correct. | --- | --- | --- | The Permissions workflow follows the permissions and settings of the current model or workspace. Check the displayed values before continuing with the next Permissions operation. Use the Permissions controls to complete this task and verify the result.

Review the available Permissions options, then save the change when the result is correct.

Configuration

- Follow the Permissions workflow and verify the result before saving.
- Follow the Permissions workflow and verify the result before saving.
- Follow the Permissions workflow and verify the result before saving.

Approval management

Use the Approval management controls to complete this task and verify the result.

Overview

1. Complete this step in the Approval management workflow, then verify the result.
2. Complete this step in the Approval management workflow, then verify the result.
3. Complete this step in the Approval management workflow, then verify the result.
4. Complete this step in the Approval management workflow, then verify the result.

Review the available Approval management options, then save the change when the result is correct.

The Approval management workflow follows the permissions and settings of the current model or workspace.

Check the displayed values before continuing with the next Approval management operation.

Usage

1. Complete this step in the Approval management workflow, then verify the result.
2. Complete this step in the Approval management workflow, then verify the result.
3. Complete this step in the Approval management workflow, then verify the result.

Use the Approval management controls to complete this task and verify the result.

Review the available Approval management options, then save the change when the result is correct.

Configuration

1. Complete this step in the Approval management workflow, then verify the result.
2. Complete this step in the Approval management workflow, then verify the result.

The Approval management workflow follows the permissions and settings of the current model or workspace.

Operation notes

Check the displayed values before continuing with the next Approval management operation.

Version history

Use the Version history controls to complete this task and verify the result.

Overview

1. Complete this step in the Version history workflow, then verify the result.
2. Complete this step in the Version history workflow, then verify the result.
3. Complete this step in the Version history workflow, then verify the result.

Review the available Version history options, then save the change when the result is correct.

The Version history workflow follows the permissions and settings of the current model or workspace.

Usage

Check the displayed values before continuing with the next Version history operation.

Use the Version history controls to complete this task and verify the result. | --- | --- | Review the available Version history options, then save the change when the result is correct. The Version history workflow follows the permissions and settings of the current model or workspace.

Check the displayed values before continuing with the next Version history operation.

1. Complete this step in the Version history workflow, then verify the result.
2. Complete this step in the Version history workflow, then verify the result.
3. Complete this step in the Version history workflow, then verify the result.
4. Complete this step in the Version history workflow, then verify the result.
5. Complete this step in the Version history workflow, then verify the result.

Use the Version history controls to complete this task and verify the result.

Review the available Version history options, then save the change when the result is correct.

The Version history workflow follows the permissions and settings of the current model or workspace.

Configuration

- Follow the Version history workflow and verify the result before saving.
- Follow the Version history workflow and verify the result before saving.
- Follow the Version history workflow and verify the result before saving.

Script generation

Use the Script generation controls to complete this task and verify the result.

Generate JPA Class

1. Complete this step in the Script generation workflow, then verify the result.
2. Complete this step in the Script generation workflow, then verify the result.
3. Complete this step in the Script generation workflow, then verify the result.
4. Complete this step in the Script generation workflow, then verify the result.
5. Complete this step in the Script generation workflow, then verify the result.

Review the available Script generation options, then save the change when the result is correct.

The Script generation workflow follows the permissions and settings of the current model or workspace.

Overview

1. Complete this step in the Script generation workflow, then verify the result.
2. Complete this step in the Script generation workflow, then verify the result.
3. Complete this step in the Script generation workflow, then verify the result.
4. Complete this step in the Script generation workflow, then verify the result.

Check the displayed values before continuing with the next Script generation operation. | --- | --- | --- | Use the Script generation controls to complete this task and verify the result. Review the available Script generation options, then save the change when the result is correct.

The Script generation workflow follows the permissions and settings of the current model or workspace.

Check the displayed values before continuing with the next Script generation operation.

Use the Script generation controls to complete this task and verify the result.

Review the available Script generation options, then save the change when the result is correct.

Usage

The Script generation workflow follows the permissions and settings of the current model or workspace. | --
- | --- | --- | Check the displayed values before continuing with the next Script generation operation. Use the Script generation controls to complete this task and verify the result. Review the available Script generation

options, then save the change when the result is correct.

The Script generation workflow follows the permissions and settings of the current model or workspace.

Comments

Use the Comments controls to complete this task and verify the result.

Overview

1. Complete this step in the Comments workflow, then verify the result.
2. Complete this step in the Comments workflow, then verify the result.
3. Complete this step in the Comments workflow, then verify the result.
4. Complete this step in the Comments workflow, then verify the result.

Review the available Comments options, then save the change when the result is correct.

The Comments workflow follows the permissions and settings of the current model or workspace.

Usage

Check the displayed values before continuing with the next Comments operation. | --- | --- | --- | Use the Comments controls to complete this task and verify the result. Review the available Comments options, then save the change when the result is correct. The Comments workflow follows the permissions and settings of the current model or workspace.

Check the displayed values before continuing with the next Comments operation.

Configuration

- Follow the Comments workflow and verify the result before saving.
- Follow the Comments workflow and verify the result before saving.
- Follow the Comments workflow and verify the result before saving.

Operation notes

- Follow the Comments workflow and verify the result before saving.
- Follow the Comments workflow and verify the result before saving.

Online modeling

Use the Online modeling controls to complete this task and verify the result.

Overview

Review the available Online modeling options, then save the change when the result is correct.

Usage

1. Complete this step in the Online modeling workflow, then verify the result.
2. Complete this step in the Online modeling workflow, then verify the result.
3. Complete this step in the Online modeling workflow, then verify the result.

The Online modeling workflow follows the permissions and settings of the current model or workspace.

Check the displayed values before continuing with the next Online modeling operation.

Configuration

- Follow the Online modeling workflow and verify the result before saving.
- Follow the Online modeling workflow and verify the result before saving.

Saveversion

Use the Online modeling controls to complete this task and verify the result.

1. Complete this step in the Online modeling workflow, then verify the result.
2. Complete this step in the Online modeling workflow, then verify the result.

Review the available Online modeling options, then save the change when the result is correct.

The Online modeling workflow follows the permissions and settings of the current model or workspace.

Operation notes

Check the displayed values before continuing with the next Online modeling operation.

Related tasks
